

CenterPoint Energy: May 30th Construction update

CenterPoint Energy maintains a 14,000-mile pipeline system across Minnesota. The maintenance and modernization of this infrastructure is key to providing safe and reliable natural gas service to our valued communities.

Gas main installation continues along Center Avenue, between 3rd Street NE and 1st Street SW. Street parking is restricted in active work zones.

We expect two more weeks of construction on the gas main in the road. At that point, a service crew will begin connecting service lines to the new main and moving indoor gas meters outside.

Thank you for your patience and understanding as we replace our infrastructure! We value the privilege of having you as a customer. Questions? [Head to our website](#) for more information about the construction process and impacts on the area.
